Smart Community Exchange (SCE) presents:

Cyber Center of Excellence (CCE)

Cyber Center of Excellence (CCE)

Promoting Awareness

Recognizing the importance of Cyber Resilience awareness, the Cyber Center of Excellence is committed to raising cyber resilience awareness and to working across all levels of private sector and government, locally, regionally, nationally and internationally to build Cyber Resilience.

CCE engages and educates public and private sector partners through events and initiatives with the goal of raising awareness about cyber resilience and increasing the resiliency in the event of a cyber-incident.

National Cybersecurity Awareness Month

CCE promotes Annual National Cybersecurity Awareness Month in October. Since 2004, National Cybersecurity Awareness Month has been formally recognized in October by Congress, federal, state and local governments, as well as leaders from industry and academia. This united effort is necessary to maintain a cyberspace that is safer, more resilient, and remains a source of tremendous opportunity and growth for years to come. Contact us to learn how you can participate in CCE's National Cybersecurity Month awareness program. Our themes include, but are not limited to:

Cyber Resilience & STEM

Promoting and expanding cyber resilience education is essential to protecting our critical infrastructure. In order for the United States to best protect our interests in the 21st century, a new workforce needs to be educated and the current workforce needs additional skills. From elementary schools to postgraduate institutions, Educators need to understand the critical knowledge, skills and abilities that future Cyber Resilience professionals need to learn.

We must build a digitally literate workforce that uses technology in a secure manner. To do so, we must teach science, technology, engineering and math (STEM), and other critical subjects to all students and educate all students on the secure use of today's evolving technologies.

We strive to provide educators and students with the information necessary to become members of this new workforce. Students can find various resources about foundational skills for a career in cyber resilience, collegiate level programs that have courses that interest them, and continuing education resources for outside the classroom. Educators can find various curriculum resources and programs to help identify the skills and knowledge students need to become members of this growing community.

Professional Development

Workforce Training

By partnering with academia and industry, the Cyber Center of Excellence (CCE) delivers Cyber Resilience education and professional development programs to produce high-skilled, knowledge-based workers. These cyber professionals will help the nation improve critical infrastructure resiliency and address the growing cyber threat to public and private networks. This Cyber Resilience focused, Education and Training model empowers Educators and Workforce. This cyber curriculum is implemented in K-12 Schools and Technical Schools and continues to expand through our fast growing network of partners and contributors.

Cyber Center of Excellence (CCE) Platform

Cyber Center of Excellence (CCE) is a catalytic platform for engaging participants in the Cyber Resilience applications and the need for and use of security in cyberspace. At its core, CCE is a professional implementation platform which allows participants to learn from Cyber Resilience Experts. CCE workshops guide participants through a series of hands-on challenges. The experience includes co-innovation Cyber Resilience program.

How to Get Involved

- Read news www.SmartCyberReview.com
- Share your news with our audience
- Attend or co-host our working groups, training, events
- Join our Speakers Bureau
- Introduce your product, service, project to our audience
- Support our STEM Initiatives
- Adopt-A-Cyber Classroom
- Contribute to our partner projects
- Become a Sponsor

Get Involved Today!
